TELEX LAUNCHES NEW SPINWISE® RACKMOUNT CD and DVD COPIERS

The new Telex SpinWise® rackmount system offers blazing 52X and 4X speed for better return on investment.

Atlanta, GA (June 9, 2004) Telex Communications announces the launch of the Telex SpinWise Rackmount series of 52X CD and 4X DVD +/- copiers at InfoComm, Booth #2545, the Sidney J. Marcus Auditorium, and ballroom #A311. The new line provides significant return on investment by doubling the disc-per-hour capacity. Telex has been manufacturing high-end pro-audio and data solutions for over 75 years. This expertise has been leveraged to create a premium line of duplication devices for broadcasting, recording, project studios and houses of worship.

“This rackmount system is by far the most cost effective system on the market with 80GB of hard drive allowing for track extraction and compilation of multiple audio, and video images. This is significant for saving money over the long haul for broadcasting, houses of worship and project studios that use CD and DVD media to communicate.” Explains Paul Sorensen, National Sales Manager for Telex.

Telex understands the constraints on space in most rackmount environments. Sorensen comments further, “When we sat down with the designers we knew it would be imperative to develop a system that would help these business improve production and supplement the products in the system. We listened to what our customers were asking for.”

About Telex Communications
